

PROFESSIONAL PROFILE

Data analyst and engineer with progressive experience across financial crime analytics, data solutions and cloud data engineering at Santander UK. Translate stakeholder needs into technical requirements, governed data assets and measurable delivery plans. Led readiness assessment for approximately 80 use-case migrations and developed Power BI leadership reporting; maintained migration-wide milestone, ownership, status and dependency tracking, with follow-up and escalation of blockers. Combine SQL and analytical capability with data-quality controls, risk awareness and cross-functional engagement.

CORE CAPABILITIES

Project & portfolio delivery: Business and technical requirements; migration portfolio milestones and delivery status; task ownership, dependency and blocker tracking; stakeholder follow-up and escalation; project monitoring; roadmaps and backlogs; auditable sign-offs.

Data management & controls: Data accuracy and completeness; metadata and cataloguing; data governance; quality controls; audit trails; change-controlled delivery; privacy, security and compliance; architectural reviews.

Analytics & reporting: Power BI dashboards; SQL and SAS SQL; management information and performance reporting; data analysis; data modelling; customer insight and financial crime analytics.

Platforms & delivery tools: AWS (S3, Glue, SageMaker, Lake Formation, Lambda, Athena); Power BI; Planview (weekly timesheet entry); Python; Terraform; GitLab CI/CD; Jira; Confluence; REST APIs.

AI & workflow automation: Atlassian Rovo (AI agents, EMR compliance monitoring and Jira workflow automation); Microsoft 365 Copilot; Devin AI; Python automation.

PROFESSIONAL EXPERIENCE

Santander UK | Data Engineer – Cloud, Governance & Data Engineering Aug 2024 – Present

- Work with Product Owners, Business Analysts and engineers to turn business objectives into technical requirements for cloud data solutions, integrations and data assets; maintain solution vision, roadmaps and delivery backlogs.
- Led AWS solution design and migration work that reduced operational costs by 25%; communicated delivery progress, changes, risks and impediments, with remediation recommendations to protect outcomes.
- Defined AS-IS and TO-BE data architecture, modelling, security and governance standards; carried out architecture and compliance reviews and introduced metadata tagging and cataloguing for better data discovery and control.
- Automated access-management workflows with Python and IAM policies, reducing manual authorisation activities by 40%; embedded GitOps controls, audit logging and secure infrastructure provisioning.
- Led the platform contribution to a data-management Target Operating Model supporting 300+ engineers, standardising documentation and implementing quarterly governance reviews with staleness tracking.
- Designed AWS Lake Formation tag-based data classification across a multi-account platform serving 300+ engineers, identifying metadata and validation failures affecting governance controls.

Santander UK | Data Solution Analyst Feb 2023 – Aug 2024

- Led business and technical readiness assessment for approximately 80 CDSW and Plotly use cases transitioning to AWS SageMaker and Power BI; mapped data dependencies, constraints and critical success factors with Finance, Data Science, Risk and data owners.
- Coordinated source-table transitions with ingestion and engineering teams; built a central Power BI dashboard showing migration velocity and table-level delivery status to senior leaders.
- Tracked migration portfolio milestones across assigned use cases, including owners, tasks in progress, stakeholder-input dependencies, ready-for-completion items and completed work; followed up with colleagues and escalated blockers.
- Developed a decision-tree framework and proofs of concept to validate fit against stakeholder requirements, supporting evidence-based full, partial or phased migration sign-offs with an auditable record.
- Established governance and exception-handling criteria for data trust, target architecture assumptions and agreed definitions of success across the migration programme.

Santander UK | Data Analyst Feb 2022 – Feb 2023

- **Financial crime detection and AML analytics:** Developed a data-merging framework linking customer identities with Suspicious Activity Report (SAR) narratives to support investigations into potentially concealed illicit activity.
- **Transaction and customer risk analysis:** Used SAS SQL and SQL to analyse unusual inflows, cash deposits and international transactions, including indicators of fraud, human trafficking, tax evasion and trade-based illicit flows.
- **Data quality and control improvements:** Examined customer occupations, risk levels and geographic links; assessed completeness and accuracy, identified SQL-based monitoring improvements, and supported remediation of higher-risk populations.

We-Are-Group UK | Data Analytics Bootcamp Trainer (concurrent role) Aug 2023 – Aug 2024

- Delivered hands-on SQL, Python, cloud analytics and secure data-handling training, translating technical topics for learners with varied experience.

Polaris Bank | Customer Insight Analyst Aug 2014 – Sep 2019

- Created customer segmentation and loyalty programme insights associated with a 20% increase in revenue and customer base; communicated recommendations to sales and marketing stakeholders.
- Produced accurate management information, tracked performance measures and supported customer account reviews and database quality in a regulated banking environment.

SELECTED ANALYTICAL & GOVERNANCE CONTRIBUTIONS

- Regulatory data reliability: diagnosed AWS Glue/S3 throttling involving 2,405 partitions of regulatory reporting data and designed retry, concurrency and compaction improvements.
- Automated compliance reporting: built an Atlassian Rovo agent to check Amazon EMR clusters weekly for approaching end-of-support dates, generate a compliance summary and automatically raise a Jira ticket for follow-up.
- Community development: mentored University of East London students in SQL, Power BI and cloud computing (May 2024 – Present); delivered a three-month SQL programme for 30+ professionals (Jan–Mar 2024).

EDUCATION & CERTIFICATION

MSc, IT Security Nottingham Trent University, UK | 2019–2021

BSc, Physics University of Lagos, Nigeria | 2008–2012

Professional certification: AWS Certified Cloud Practitioner; AWS Solutions Architect Associate (in progress)
